Continuation of 11. does NOT place the application in condition for allowance because: With respect to applicant's reply that Hancock et al. fails to disclose the control means for controlling a switch time of the electric switch control a voltage across terminals of the switch, the examiner respectfully disagrees. The examiner has provided, on pages 3-5 of the final Office action, how Hancock et al. fully meets the limitations as noted above given its broadest reasonable interpretation. Furthermore, Hancock et al. explicitly discloses "after the power is turned on, the timer (15) begins supplying pulses to the set input (17b) of the latch (17) having a duration and repetition rate as required by the application" (column 6, line 67 – column 7, line 3). Therefore, the examiner maintains the 35 U.S.C. 102(b) rejection anticipated by Hancock et al.

With respect to applicant's reply that Prager fails to disclose the control means for controlling a switch time of the electric switch control a voltage across terminals of the switch, the examiner respectfully disagrees. The examiner has provided, on pages 5-7 of the final Office action, how Prager fully meets the limitations as noted above given its broadest reasonable interpretation. Furthermore, Prager explicitly discloses "internal power switch 6 is controlled in dependency of the status of... timers provided within the control unit" (page 3, paragraph 33). Therefore, the examiner maintains the 35 U.S.C. 102(a) and (e) rejection anticipated by Prager.

In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., "duty cycle" control) are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See In re Van Geuns, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).
